Solar power is a rapidly growing industry. The main objective of the EU-H2020 research project CIRCUSOL is to provide **systemic circular business solutions** to the solar power industry. The solar power sector is well suited for such business models. They have the potential to deliver double benefits on resource efficiency and low carbon emission.

The research is conducted by the Institute for ICT-Based Management ICTM which is part of the Centre for the Digital Society from the Bern University of Applied Sciences.
